Sustainable Procurement Policy

This policy of ATG Group sets out our commitment to carry out our procurement activities in an environmentally and socially responsible manner and reinforces our commitment to building on our reputation of sustainability.

In line with our Environmental Policies, we will strive to incorporate environmental and social considerations into our procurements processes.

Our commitment is to:

- Encourage our employees to review their consumption of goods and services to reduce usage where possible
- Endeavour to identify and offer sustainable products and services to our customers
- Give preference to local suppliers and subcontractors where practicable to minimise the environmental impact associated with transportation and to support the local economy
- Prioritising suppliers who have embedded sustainable and ethical practices within their organisations and who drive such practices within their own supply chain
- Aim to avoid the use of materials and substances with hazardous properties, and processes that could damage the environment and health
- Encourage the reuse of materials as a priority, in preference to the purchase of new materials
- Promote the minimisation of waste at all levels
- Promote awareness of this policy amongst employees and the supply chain

ATG Group recognises the important role it has to play for the achievement of a more sustainable future and will implement this procurement policy as an element within our overall sustainability strategy.
